

The Field Engineer is responsible for installing new fiber services for customers as well as testing and troubleshooting new and existing circuits. This position receives guidance from other Engineers, the OSP Manager and works closely with internal Network Technicians and Network Engineers.

Responsibilities

- Responsible for installing new customer premise equipment.
- Fiber and circuit testing on new and existing services.
- Perform preventative maintenance on all OPTK owned and operated equipment.
- Maintain Hut and cabinet preventative maintenance schedules.
- Responsible for updating all OSP records to include: OSP Insight, Diggers Hotline, Patch panel assignments, SharePoint documentation, and Smartsheet.
- Coordinate emergency fiber repair and restoral as needed.
- Responsible for managing the relationships with partners and keeping projects on schedule.
- Participate in an on-call rotation, work during scheduled maintenance windows and during network outages as needed.
- Performs other functions and duties as may be directed or assigned.

Preferred Talents

- Effective communicator – written and verbal
- Time management skills
- Flexibility
- Self-motivated

Qualifications

- Two-year technical degree in telecommunications or related field required or 1-2 years of experience in related area. Experience in related area may replace educational requirements.
- Valid driver's license.
