

The Network Engineer is responsible for OPTK's network stability and growth. The Network Engineer should be comfortable with being the next level technical support consultant if a Network Technician requires assistance and should be capable of triaging a situation based on the needs of the customer and the network. When not troubleshooting an issue, the Network Engineer's primary responsibility will be to facilitate the continued growth of the network while maintaining its integrity and resiliency.

Core Responsibilities:

- Commissioning Core Transport & Routers
- Network Performance monitoring
- Circuit Design
- External Network-Network Interface planning
- Network Expansion research & planning
- Outage Triage & Restoration
- On-Call & Maintenance rotation
- Network related projects – both team oriented and independent.
- Managing inventory – determine equipment needs & maintain accurate inventory.

Qualifications & Requirements:

- High School diploma or equivalent
- Network + certification is beneficial
- 1 year - OPTK Networks infrastructure experience | External network experience considered
- Some College or Experience in Computer Science or Networking
- An appreciation for technology

Company Benefits:

- Health
- Dental
- Vision
- 401(K)
- PTO
- Paid Holidays
- Group term life insurance
- Accidental death insurance
- LTD insurance
- Tuition Reimbursement
